

Roulette

Money

Introduction

What to expect and what not, from this ebook

- Do not expect to get rich quickly, but maybe slowly yes !!!
- Expect to work hard - not for long
- Do not expect to find a magical system
- Expect to learn to reason and plan.
- Expect to learn discipline, and self-control !!
- Do not expect the roulette game to be scientific and mathematical
- Expect to learn an art form!
- Do not expect numbers to come out randomly
- Expect the numbers that come out, are the physiological consequence, of more natural forces than they act interacting with each other.

Basic theory of a winning roulette system

The first thing to understand is how to create profit from roulette: On the European wheel, there are 37 numbers included 0. Consider starting with a bankroll of 37 units. . . . Now, if you bet on a number for 37 laps, on average, there you can expect to win once in 37 laps. If the winnings it was 37 - 1, t would end up exactly with the bankroll initial (37 units). But the problem is the payout of the casino, which it's actually 35-1. This means that you are paid less than a "fair" winnings. This situation is consistent with all types of bets, including external bets.

So the only way to overcome this "advantage of the home "is to bet on the winning number with an accuracy greater than 1 to 35.

Many players do not understand this concept, and this is the reason for which most systems and players fail.

You can beat roulette, but not the betting table: the same Einstein once said: Read carefully the this statement "You can not beat a table of the roulette unless you steal money from it."

Most people understood that they meant the game of roulette is unbeatable, but this is wrong. He made his statement on the table, not on the wheel of roulette.

While it is quite true that you can not beat a "table of roulette ", it is certainly true that you can beat one "roulette", and therefore the game of roulette.

Although the betting table is one sparse representation of the wheel, certainly not the same thing.

For example, let's consider the first dozen (numbers 1-12). Each of these twelve numbers are perfectly scattered in various sectors of the wheel.

In the same way, other external bets are not one representation of the specific sectors of the wheel. The green number is deliberately designed for non-represent the sectors of the wheel because casinos know, that it is not possible to predict any "bet on" out of roulette "with sufficient precision a overcome the edge of the house while they know it's possible predict which sector of the wheel will have the winning number with sufficient accuracy to overcome the edge of the home.

Although some casinos allow bets on sectors, on roulette tables the only way to cover one Wheel sector is betting on a number (bets inside the roulette).

Once you understand this principle, you understand that the systems based on external bets; they simply can not win in the long run.

Only this knowledge will help you eliminate about half of roulette systems for sale on the internet. !!!!!

One should always and only consider one system based on the sectors of the wheel, because it is the only way for a system to be effective.

But how do you intend a winning system, the common player?

He usually thinks of a method that makes him win every day, that never sends him into passive or almost, and maybe he realizes all this with a tiny capital
!!!! In conclusion; he wants a full beat and a drunken wife!!!

Think about this because you do not have the right knowledge and the mental attitude set for the successful business, why play, it's not a game.

Any entrepreneurial activity that you undertake, and that by definition it is a "risk activity", it needs an adequate business plan and a basic capital that it must necessarily take into account the INEVITABLE difficulties which - especially at the beginning - will have.

Remember that when you start, your earnings are for force of things equal to ZERO.

If you do not have a capital to invest for the purchase of consumables, machines, rent offices or premises, to advertise, in short, to "start the business", like do you think you will not fail after a few days?

Why should roulette be different?

If you intend to play seriously, you cannot look for the big shot. You have to go to work with one adequate awareness. And you have to go there every day.

Maybe your "job" will end in no time, or maybe it will last for hours, but you have to do it every day...

You do not improvise entrepreneurs, you need to know a lot, many things, have a sense of smell, luck, be attentive to the market and to the needs that are constantly evolving.

We cannot fossilize ourselves, we must be dynamic

You do not even improvise players, it seems obvious. If you do not have it in mind, forget it.

You have to be prepared, do a work project, apply it and stick to it tightly.

If you claim to win a capital with 3 pieces in your pocket, I repeat, it means that you are entrusting yourself to a gigantic one blow your ass, put it on your head.

Now, below, some basic tips for approach the game with the right mentality.

THE CLARITY OF THE OBJECTIVE

The moment you leave for gold you'll leave you will feel ready to overcome any adversity, to face your opponents.

You will continue without dwelling too much on why obstacles because you have only one goal in mind: get first to the TREASURE!

At this point you might think that it is not enough to ask oneself Objective for this to be realized and I fully agree.

Once the goal is established, you must develop a plan well detailed information on how to achieve it, followed by the action constant aimed at its realization.

Returning to the previous example, in fact, as desired tradition are few those who can find the precious treasure chest, while others fail.

If you are a successful person you will only be able to share with me these axiomatic truths.

If instead you have not yet achieved the results you are prefixed, deepen these notions and become them a rule of life.

...now you're thinking:"

These are beautiful speeches, BUT THAT CAVOLO CENTER THIS WITH THE GAME??

Well, the game is no exception. Also in this if you want real results that last over time you have to fix your goals in advance.

THE THREE MAIN OBJECTIVES ARE THE FOLLOWING:

- 1 Your first goal is to establish the daily budget for the gambling hall.
- 2 The second objective is to establish the exact amount you want to win in a single day, which must always be the same for the duration of stay. Respect these two goals is crucial to keep the control and mental balance.
- 3 The third objective is to give you a schedule of entry and exit from the casino and respect it! (Ex. enter 16.30, exit 21.30).

BE VERY CAREFUL

If your first day will start at great you will be tempted not to respect the Objective, and if the winnings achieved in the first day will be higher than the one you established at the start, even on the second day you will pursue a similar win or higher because you will not be able to settle for one Lower objective.

THE RULE IS TO FIX THE OBJECTIVES IN ADVANCE PRINCIPALS AND RESPECT THEM UNTIL THE END WITH DETERMINATION AND DISCIPLINE.

When you have set the daily amount you want to make, to determine your game budget, which is yours financial coverage, you have to multiply your coveted winnings for four; against a payout of 120 euros per day you must have 480 of financial coverage:

$$120 \times 4 = 480$$

All clear?

Very well, let's see now to give an example of yours hypothetical game weekend.

The first day you have reached the set target of 120 euros of winning against an investment budget of 480 euros, or you can leave the casino to enjoy the city.

But what will be the investment budget for the second day?

Always the same: 480 EURO

In this case as soon as you have reached 120 euros of winning you can go for a walk through the streets of the center.

Here's what is meant by a Balanced Game, you could win a lot more by taking advantage of the favorable moment, but self-discipline requires you to respect your final objective.

I repeat the concept...

You must commit yourself to winning the amount you have set in departure, if you let yourself go to a higher winnings you will not want to respect the objective not even the following day due the triggering of a mental mechanism that will be refused be satisfied with a winnings inferior to the previous one.

In doing so, I inevitably lost sight of them objectives and consequently LOSE the balance achieved to which the First Path refers.

By no longer having the necessary references, you will continue to win to the bitter end but most likely LOSE EVERYTHING!

Do not review your goal on the upside because you are mentally prepared for what you have already established leaving.

Vice versa concluding the day with a lower profit a expected one:

You will further strengthen your mental balance by maturing one great awareness for subsequent evenings.

In summary....

..... if you have placed 120 euros as a daily goal do not change your mind when you are in front of the green table raising to 200 and telling you the excuse that there is not much difference.

You must have clarity of intent once you have taken one decision is not back.

On the contrary if your daily goal is 120 euros, but your evening comes to an end with 84 euros of profit, not continue beyond trying to get to 120 established.

You have set an entry and exit time from the Casino and you MUST respect it.

When you will be able to meet all your goals without let yourself be influenced by the result and without being dragged by the vortex of the game, you will be able to face peacefully any unforeseen event and you will have corroborated your Self Control (self-check).

On Which basis this method is developed

In roulette it is believed that the numbers that result, one after another they are random, but the truth is another, everything is under the law of cause and effect, and therefore also the Real roulette "suffers the effects of this law."

The friction of the ball, the speed of the spinning wheel, the strength of deceleration suffered by the ball, the force of gravity, the humidity of the air,

are the phenomena that interacting with each other, they generate these models.

This allows you to use these repeating patterns often, with enough precision to have that small advantage, which allows you to make a profit.

The crux of the matter is to find them to use them in the right time, and know how to monetize this phenomenon natural.

This system is the key that opens your eyes to this wonderful physical phenomenon of repeatability and to use it to your advantage.

There are 10 dynamic patterns of repeating numbers, and the method explains step by step how to find them, when put them into play and for how long.

LEARN THE SECRETS TO WIN THE ROULETTE
ROULETTE IS A GAME OF PHYSICS, NOT MATHEMATICS

"You play only on full numbers !!!"

Dear player my approach makes me able to operate with very low risks, often much lower than you can imagine.

It is an approach that raises the decision to the highest levels to avoid losses.

The main feature is not to play so excessive, and to avoid losses almost fanatically.

This approach, which allowed me to be a lot safe during player activity, it was also a lot profitable year after year.

1. Learn to protect your capital
2. Learn to simplify your life as a player
3. Learn how to accumulate profits.
4. You no longer have to worry about how they pull the ball, or if change the

croupier, because when you have understood mine approach, you know how to play clearly and accurately.

5. Enter the game, only when you have the best odds of to win

6. Learn to read the numbers that come out below another point of sight

7. You will play as the wise owner of a company profitable that knows how to create profits and grab them at the moment appropriate.

Now it's time to explain and explain the method Advanced Finals for LIVE Real Roulette, both those with croupier are the automatic ones but only and exclusively real roulette with wheel and physical ball.

The method is very effective because it is based on physical phenomena, to which we are all exposed, gravity, friction, etc. even if we do not see them, we are affected by them.

The Advanced Finals method is for those who want to really dealing with roulette with a mindset from professional, because success is 80% mental state and 20% method-strategy, and those with experience in this regard know well why.

DESCRIPTION OF THE TECHNIQUE

Below is a mini table showing all the single finals:

Finale Zero:	0, 10, 20, 30
Finale Uno:	1, 11, 21,31
Finale Due:	2, 12, 22 ,32
Finale Tre:	3, 13, 23 ,33
Finale Quattro:	4, 14, 24 ,34
Finale Cinque:	5, 15, 25 ,35
Finale Sei:	6, 16, 26 ,36
Finale Sette:	7,17,27
Finale Otto:	8,18,28
Finale Nove:	9, 19, 29

Write this black box on a sheet or on an Excel file containing all the finals.

```
0 1 2 3 4
5 6 7 8 9
```

Strategy:

As the numbers come out, the ending in question, so if you exit 17 you delete the number 7 from the box.

The attack will only be done when a final one remains only.

Suppose the final left is 6 your attack will not be only to the exponents of the final 6 (ie 6 - 16 - 26 -36), but also to its two side neighbors on the Cylinder.

To better explain the concept, the twenty numbers from aim are the following:

0-1-3-5-6-8-11-13-16-17-24-25-26-27-30-32-33-34-35-36

The repetition in the play of the 27th and the 13, which are close to both the 6 and 36.

The system plans to aim for the further two sides that they come after the other 2 side, that is starting from 6, to his left we have 25 and after the two sides of 36 we have 8.

Below is a table containing all 20 numbers for the final.

FINALE 0	FINALE 1	FINALE 2	FINALE 3	FINALE 4	FINALE 5	FINALE 6	FINALE 7	FINALE 8	FINALE 9
0	1	0	0	1	0	0	2	3	0
1	2	2	1	2	2	1	3	5	1
3	4	3	3	4	3	3	6	7	2
5	8	4	5	5	4	5	7	8	4
8	9	7	6	6	5	6	9	9	7
10	11	9	8	9	10	8	11	10	9
11	13	12	10	10	12	11	12	11	12
14	14	15	11	14	15	13	13	12	14
15	16	17	12	15	16	16	17	14	15
19	18	18	13	16	17	17	18	18	18
20	19	19	16	17	19	24	21	22	19
23	20	21	20	19	21	25	22	23	20
26	21	22	23	20	23	26	25	24	21
24	22	25	24	21	24	27	27	26	22
30	24	26	26	24	25	30	28	28	28
31	25	28	27	25	26	32	29	29	29
32	30	29	30	27	28	33	30	30	31
33	31	31	33	31	32	34	34	31	32
35	33	32	35	33	34	35	35	35	33
36	36	35	36	34	35	36	36	36	35

This is the progression to be applied to the method.

N. SHOT	QUANTITY' OF NUMBERS IN PLAY	QUANTITY' OF PIECES ON THE SINGLE NUMBER	FICHE BETS	Exposure AND IN LOSS	WINNING IN EURO SUL FULL	EXPRESS IN EUR
1 st shot	20	1	20	20	36	16
2 nd shot	20	2	40	60	72	12
3 rd shot	20	5	100	160	180	20
4 th shot	20	11	220	380	396	16

The method is based on the cylinder numbers, you will notice from alone, like the ball in its vortex inside the cylinder it will always fall on one of the side numbers that concerns the final in question after the **condition initial has been met.**

Statistically my system closes the game by the third shot.

The percentages resulting from the application have highlighted that is won by the second shot in 70% of cases; within the third hit in 90% of cases; within the fourth shot, as yes it can rarely be deduced necessary, it has always been obtained result.

Even if none of my analyzes have occurred from my analysis anomaly, I cannot exclude a priority that it is possible check the exit of the late final or its neighbors also after the fourth shot.

But even if this were to happen, that's not a problem day you will pay the cost of this wonderful game, so it will only be taken as a small joke stop during our wonderful journey.

I tell you already that you will not believe what you will see because it works very well, and it's really fun to play; knowing that in most matches yes gain.

SEEING IS BELIEVING !!!

Remember; that a good day of play is not when it is earned, but it is when it is respected to the letter its own action plan, and several days good you will follow; the more you will have profits in the medium and long period.

It is more important the direction that the speed with the advanced!!!

THE REAL PROBLEM IN THE ROULETTE GAME

The real problem in roulette is YOU. That's right!

YOU are the only problem in the game of roulette that can be solved, and for some people this can be done only with the utmost dedication and maximum commitment.

If you become aware of what I am about to reveal to you, you will change completely your approach to the game of roulette.

The game of roulette is not a problem that should be Resolved. Yes, many aspiring players try with all their forces to solve this alleged problem.

They try desperately to invent a method, one technique, or a formula that produces winnings.

They combine all the elements they can find, for try to build game systems that can solve what they perceive as the problem in the game of roulette.

But there is no system that can solve the truth problem of the game of roulette. What I'm about to tell you will change your perception of the game, or it will allow you to concentrate on the only thing you can do to become a winner.

If you do this constantly or disordered, this will have consequences on the degree of success you can have, but it will not change the truth I'm about to show you.

Imagine a puppet with wires. The puppet can go up, grasp the control levers and move alone? No, this does part of a separate environment, completely outside the his control.

The player is in the same situation: it depends on an environment completely outside its control. The player with his behavior becomes a part of roulette.

Cannot solve the problem of the game of roulette, the player, at that moment is the "roulette". Player participation in the game of roulette makes of he is one with the latter.
