

# The system of columns to win at Roulette

## Introduction

There are many players looking for ways to win and get information on the strategy of the columns. Do you want to break the column system too? Here is our guide on how the Roulette columns system works to win in online and real casinos. The dream of every professional Roulette player, and also that of those who play occasionally to distract themselves, is to win with a full number. Both because it is the most profitable episode, and because it is a great satisfaction to be able to guess the exact number that came out. Among the many systems, the roulette column system could be right for you to start winning at the online casino.

## How the Roulette columns system works

It is very easy to play this system of roulette columns in online casinos, because you have the possibility to take notes, even on a normal sheet of paper placed near the keyboard of your computer, compared to a real casino where you would have to remember everything by heart. Marking several indications on a sheet is the fundamental characteristic of the Roulette Columns system. On our blog you will find many important guides for the world of gambling: from the guide on the rules of Blackjack to the page with the best casino bonus 2018 always updated with the most advantageous promos. Betting on the columns is fantastic. There are so many combinations you can use to beat roulette. Bet only one column or two columns or two dozen and two columns at once or many other combinations that are almost endless.

## Procedure to run the Roulette columns system

Here are the moves to win at roulette with the column system:

1 - Prepare on a sheet a table with 9 columns of 4 spaces, so as to have 36 boxes in total, and fill these boxes with the numbers from 1 to 36 putting a number per box.

1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18
19	20	21	22	23	24	25	26	27
28	29	30	31	32	33	34	35	36

2 - At this point the player must begin to mark the numbers on this table. If you exit 5, you must put an X above the number 5 in our personal sheet.

1	2	3	4	<del>5</del>	6	7	8	9
10	11	12	13	14	15	16	17	18
19	20	21	22	23	24	<del>25</del>	26	27
28	29	30	31	32	33	34	35	36

3 - To do this will be forced to run the Roulette, and as we all know it is not possible to do it for free, but to use this strategy we still need the numbers drawn and then the player is faced with a dilemma, about the way to play losing as little as possible, collecting numbers in the meantime to implement the strategy.

4 - As the number of our games increases we will see that the numbers on our table will be more and more, when we get to have 3 out of 4 numbers already out in a column it will be time to put our strategy into practice. From now on we will play on each of the 4 numbers in the column a chip, so a total of 4 chips, for the maximum duration of 9 times, if we obviously fail to win first. Pointing a token on each of those 4 numbers we have the possibility to go in gain up to a maximum of eight attempts, with the ninth we would break even. The cycle must be considered finished even if with the ninth attempt it was not won, because otherwise even in case of victory it would be at a loss.

1 win	32 chips
2 win	28 chips
3 win	24 chips
4 win	20 chips
5 win	16 chips
6 win	12 chips
7 win	8 chips
8 win	4 chips
9 win	0 chips
