

System of the DIAGONAL.

This system involves writing down numbers that match themselves giving like the example the lower graphic on a printed cloth:

10 - 29 - 2 - 30 - 14 - 15 - 26 - 17 - 3 - 1 - 10 - 29 - 5

○		
1	2	3
4	5	6
7	8	9
10	11	12
13	14	15
16	17	18
19	20	21
22	23	24
25	26	27
28	29	30
31	32	33
34	35	36

As we will have indicated on the printed cloth they form figures that we will call semi-diagonal than be clearly marked in **RED**, that it is what our system suggests to play. As we will see in the upper graphic of example they are perfectly drawn with a Diagonal in red, these half-way DIAGONAL in this case they are the ones that we attempted to complete with the marked frames in numbers are **Blue** that we go betting Example:

7 - 19 - 18 - 27 - 22 - 9

But the ones that go away incorporating, we began when we have 12 crossed out numbers, recently there we can start betting, he goes out : We wrote down the 1 in a column of loss - 6 because 6 are the bet chips he goes out : The 7 and we won at the column of profit and between the columns of loss and profit the balance gives us **+29 chips**.

Note this system risks without progression always play with a chip, and we start playing after 12 numbers are crossed out to finish a series of 37 numbers, right after finishing this series we start again from the beginning as the party of the first part suggests it.
