

Mythical System

Chart 37 numbers showing you what numbers did appear and what numbers didn't . Now if one of the numbers that didn't appear in the last 37 spins , appear , then you will start betting on that number and only then . So you are betting one unit on one number until it hit . If another number appear start betting on that number , only one unit . So now you are betting on two numbers until one of the numbers hit . If another number appear start betting on that number until one of the three numbers hit . If one of the numbers hit and you are in profit , stop . Wait until the end of the 37 spins and begin a new session in the next 37 spins . If one of the numbers hit and a profit is not reached , keep betting until profit . To be able to play with this system you need a roulette table that produce at least 30 to 40 spins an hour .The chart and session will explain the system better .

This is how your chart will look like . Now if say number 3 appear on spin one you will write 1 next to number 3 . The numbers are already on the chart

you

must
write
the

number of the spin next to the number that have appeared.

After the first 37 numbers your chart will look like the above .

On the first spin number 15 appeared so you will write 1 next to 15 . The second spin number 20 appeared so you will write 2 next to 20 . I think this will explain the charting . If you chart the first 37 spins use a blue pen and when charting the second set of 37 numbers use a red pen so you don't get confused .

In the next chart I going to put in the second set of 37 numbers in red . The first set of 37 numbers was :
 15.20.4.5.16.5.1.35.26.33.21.7.17.19.33.12.4.0.34.2.34.25.15.10.12.5.24.7...

The second set of 37 numbers you will write in red as the numbers appear . Now if you look at the chart you will see that number 9 was the first no show to appear , so you will start betting one unit on number 9 .

This was two sessions played in the casino with a dealer who is known to sector shoot . The law of the third is not determined by the dealer , so he

cannot spin against you using this system or any system that is founded on the law of the third . It's a law and cannot be altered by a human being .

This system was tested over 200 sessions , that is 7400 spins , 8 sessions a day for 25 days . The system proved to produce a satisfied profit in every session .

Now let me show you how the two sessions went .

All the numbers that hit is in red .

Spin .	Number/s to bet on .	Bet.	+/-	Bankroll.
				100
3	9	1	-1	99
4	9	1	-1	98
5	9	1	+36	134

Now this will be wise to get out since you gained 34 % , but lets go to the end of the session to see how it turned out .

Spin .	Number/s to bet on .	Bet .	+/-	Bankroll.

6	9	1	-1	133

35	9. 6. 28. 11. 22. 23. 8. 29	8	-8	140
36	9. 6. 28. 11. 22. 23. 8. 29. 3.	9	+36	176
37	9. 6. 28. 11. 22. 23. 8. 29. 3.	9	+36	203

Now this was one good session with a 103 % gain . There where a few profitable exit points . If you decided to exit on spin 18 when number 6 had a hit and you want to begin a new session , you have to wait until the last spin , that is spin 37 and only start a new session on the first spin of the next 37 numbers to come . You must always begin charting 37 number before you can place any bets . If you leave the table and come back you must start charting a new set of 37 numbers before you can start playing .

You don't have to play until spin 37 , if you are in profit say 30% you can exit the session . It's actually better to exit before spin 37 while in profit . That is avoiding the risk of breaking even with no profit or even a negative result .

Now lets go to session no. 2 .

This is a good example what could happen if you play until the last spin . On spin 22 when number 2 had a hit the bankroll was at 155 so it was a gain of 55 % . This would have been the exit point since you got a 55% gain .

I usually exit when a 50% goal is reached .

You will get 3 types of sessions .

1. Session that will have a big gain at the end of 37 spins .
2. Session that will have a little gain at the end of 37 spins .
3. Session that will have no gain at all leaving you with a negative result at the end of 37 spins .

To avoid breaking even or ending up with a negative result , I advise to set a goal of 50 % gain of your bankroll . You can exit at any point when profit is reached ,but if 50 % gain or higher after a win is reached , exit .

You will also get the session when you will get your 50% gain in the first 10 spins , don't be greedy , rather exit while in profit .
